

Installation Manual

IDASmio DR/DR25 Filters

The IDASmio **DR** and **DR25** Filters can be attached to and detached from Canon **EF-EOS R** and its compatible drop-in mount adapters.

Also, the IDASmio **DR** and **DR25** Filters can be attached to and detached from ***TALAMPAS EF-EOSR DR and DR25** drop-in mount adapters.

*TALAMPAS is a brand name of ICAS Enterprises to whom the IDAS and IDASmio brand names also belong.

The IDASmio DR25 Filter is preferred over the DR Filter under the situation where the focus cannot set to infinity with a camera that has been modified without correcting the flange back shift due from the use of the DR Filter. The back focal length of the lens used with the DR25 will extend by ca. 0.17mm from the one used with DR.

Installation to the camera:

Take out the DR/DR25 Filter from the package.

Insert into the EF-EOS R drop-in mount adapter.

Fully insert until the filter will not move forward any farther. Now it's ready to use.
